

[SUBSTRATE AND PROCESS FOR FABRICATING THE SAME]

Abstract

A substrate comprises at least a semi-finished substrate, a circuit line, a contact and a solder mask layer. The circuit line and the contact are formed on the semi-finished substrate. The circuit line and the contact are connected together non-integrally. The solder mask layer is formed over the semi-finished substrate to cover the circuit line. The solder mask layer has an opening in which the contact is formed.
